

Reflection

As a beginner developer, I'm constantly looking at other websites (even non-blog sites) to get inspiration for the designing websites. For Electronic Primary School website, I didn't inspire by one particular website, I just try to make it unique from design view by selecting attractive colours. I use <http://colorhunt.co/> to choose a combinations of color that will attract my main visitors which are students. I proud that I was able to make my design responsive and viewable from different tablet screens. I struggled with menu alignment and choosing appropriate fonts. However, getting my friends feedback frequently about what kinds of improvements that will make my design better, simpler and creative help me a lot. Responsive Design was totally new for me, I like it and it was very useful class because it let me focus on navigation with a minimum of resizing, panning, and scrolling.

Websites Reviews

<https://medium.com/>

I like the design of medium website, it is very simple and strait-forward. The flow and hierarchy of webpage is very nice. Choosing white colour for the layout is a great idea, it makes the website clear, readable and easy to understand. The layout has a familiar review look and feel, is clean and to the point.

<http://www.warnerbros.com/archive/spacejam/movie/jam.htm>

It seems to me that the design only for decoration. This website is missing the flow part and the hierarchy of information. There are lot of break colors and the images have low resolution which affect the focal points. The font used is horrible I couldn't read well. Also, the website is not responsive while dragging the windows and changing size.
